

Single-Post Ground Mounting System

- Single-column design suits complex terrains.
- Simplifying construction, cutting labor and piling costs.
- Carbon steel (350 MPa yield strength) ensures structural robustness.

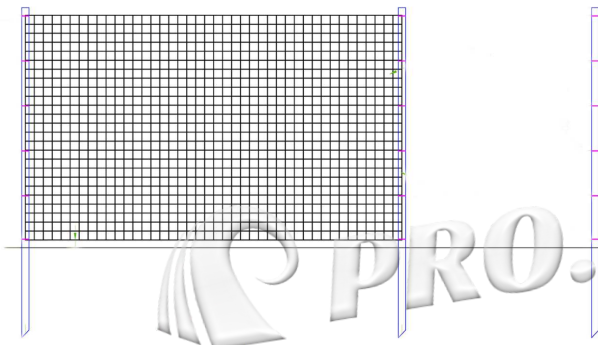

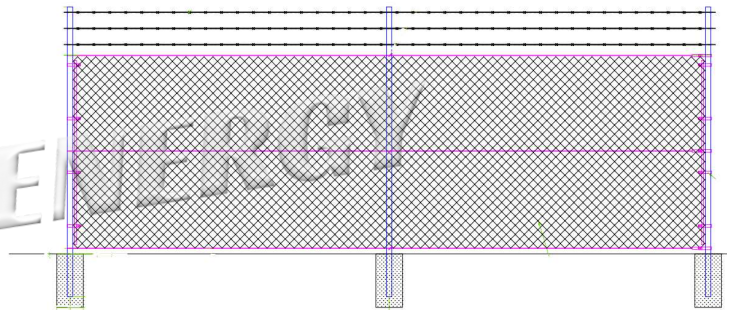

Double-Post Ground Mounting System

- Screw piles are used in soft soil conditions.
- High inclination angle is acceptable for high snow loads.
- Double columns are adopted for a strong structure.
- Aluminum and carbon steel are provided as options.

Chain link fence

- Simplified structure without top and bottom rail is easily installed on site
- Woven wire withstand shocking from outside
- One-piece pile, ground pile, concrete piling are available

Welded wire mesh

- Easily assemble, quick installation
- Simplified structure without accessories make the competitive price
- Suitable for large scale project
